

Quick Installation Guide

Grandstream GWN7052
for Home Fibre

PLEASE NOTE:

The steps in this guide should be taken after you have received confirmation from us that your fibre connection is active.

We will notify you via email upon completion or you can **contact us on 09 280 3672** for confirmation.

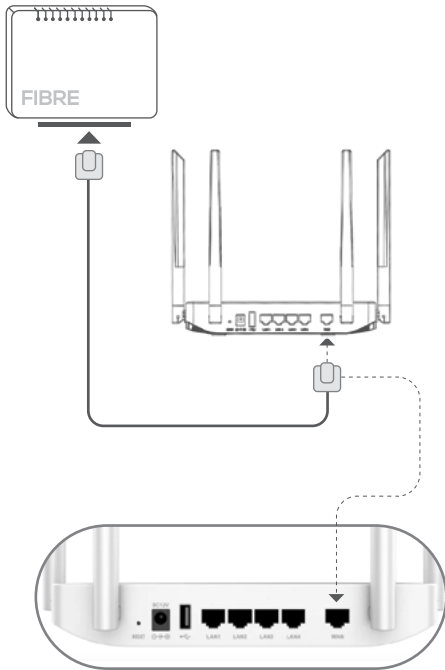

STEP 1:

Connect your modem to the fibre box

Make sure that the fibre box is powered on.

Using the black ethernet cable provided, plug one end into the **WAN** port on your Grandstream modem and plug the other end into the '**GE1**' or '**LAN1**' port on the fibre box.

NOTE:

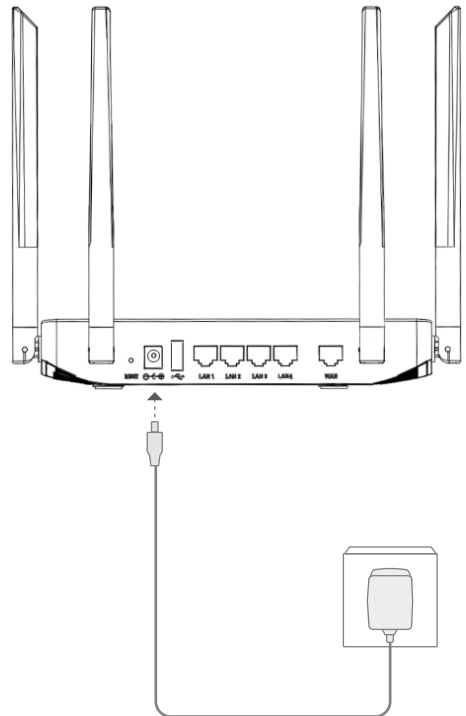

Please check your email if a **different port** on your fibre box has been enabled for your connection.

If you do not have a power cable for the fibre box, **please call our support team on 09 280 3672** so that we may log a fault.

STEP 2:

Power on the modem

Plug your modem into the wall power outlet using the power cable included.

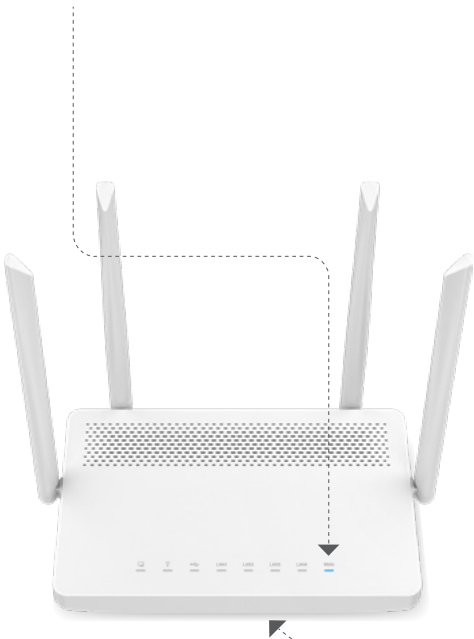

STEP 3:

Check the WAN light

Please wait 5-7 minutes after connecting your modem to power. The modem is currently going through the process of setting itself up.

The modem may restart multiple times during this process - this is normal.

You will know the process is complete when the WAN light is blinking.

STEP 4:

Connect your devices to the WiFi

You can connect devices such as your laptop, smartphone, tablet, etc. wirelessly via WiFi to your Grandstream modem.

On the base of your modem, your WiFi name is shown as **'SSID'** and your WiFi password as **'WiFi Password'**.

To connect your device:

- Open its WiFi connection setting menu
- Search for the **SSID**
- Select it and enter the **WiFi Password**

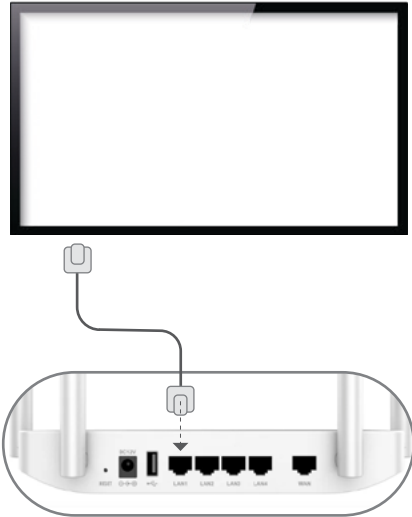

! **If you do not get a WAN light**, this will indicate that there may be an issue with your fibre connection. **Please call us on 09 280 3672** so we may place a fault request.

STEP 5:

Cabled connections for devices (optional)

You can connect a computer, laptop, Smart TV, etc, via a cable to your modem. This is preferred, as it will give you a more stable connection and sometimes faster connection.

Using an ethernet cable, connect from any of the LAN ports on your Grandstream modem to the device that you want to connect.

NOTE:

Only one ethernet cable is provided with the modem, additional cables can be purchased from your local electronics store.
